

Four screenshots, each numbered with a one-line caption:

1. `SELECT version();` result, Query Tool title showing EmployeeDB

2. Your ERD PNG (pgAdmin's Download image), all 7 tables and 7 lines readable
- The saved image did not show the lines, so I uploaded a screenshot as wellx

Screenshot:

3. The generated script after Execute, showing "Query returned successfully"

The screenshot displays the pgAdmin 4 application window. The top menu bar includes File, Object, Tools, Edit, View, Window, and Help. Below the menu, there are tabs for 'temp.pgerd' and 'EmployeeDB_schema.sql'. The main toolbar contains various icons for file operations and query execution. The central pane is titled 'Query' and shows a SQL script with line numbers 1 through 23. The script includes comments, a BEGIN statement, and two CREATE TABLE statements for 'public.personaldetails' and 'public.departments'. The bottom pane is titled 'Data Output' and shows the message 'Query returned successfully in 143 msec.'.

```
1  -- This script was generated by the ERD tool in pgAdmin 4.
2  -- Please log an issue at https://github.com/pgadmin-org/pgadmin4/issues/new/choose if you find any bugs, including reproduction steps.
